#8, Alter, Minor, German, MODL, CASC, Using the existing Japanese minor as a model, the German minor is being adapted to account for our inability to offer upper-division classes in German.

#9, Alter, Course, Title, LNSK 103, LNSK, COE, Course name is returning to the previous course name; Change course title, Old Value: Foundations for Learning; New Value: University Foundations.

#10, Alter, Program, Mathematics Comprehensive, B.S., MATH, CASC, We are proposing to append an Actuarial Science emphasis to our comprehensive major. In another proposal, we appended a new course (MATH 445) to this emphasis. Primarily the classes in this emphasis are from other departments. We don't expect large enrollments in this emphasis, but we do get some students who would like to pursue Actuarial Science and this program gives them guidance. To select the courses in this emphasis, we consulted with the Actuarial Science department at UNL, and we got the input of a graduate who been highly successful in Actuarial Science. Additionally, we are uncertain about the yearly demand for MATH 420—this class will likely be offered only every other year. To help our majors graduate on time and to give them some additional flexibility, we are changing the requirement of MATH 420 to allow any three credit 300+ MATH or STAT class
