A Couple Notes

- Instructors may choose to bring their own laptop or other mobile device to use for presentations.
- Rooms that are configured for connecting a personal laptop or other mobile device have different connectors that will interface with different devices. The display source will need to be switched to ‘Mobile Device’ to display the personal laptop/mobile device.
- While using a personal laptop or device, some features of the room (e.g., HoverCam) will not work unless the display source is switched to ‘Computer’.
- When connected to a personal laptop or device, sound will be controlled using the volume interface within the operating system of the device (e.g., the volume icon in the system tray for a Windows device or the volume keyboard buttons on a Mac device).

First, turn on the video monitor or projector. If using a projector, make sure the source is set to Digital Link. A remote control has been provided to turn on either the projector or video monitor, depending on what the learning space contains.
Locate the ring of connectors and choose the appropriate connector. These connectors will carry both a video and audio signal from the device.

The HDMI Connector may be plugged directly into a device with an HDMI port.

The Lightening Connector is used by iOS devices. The Lightening Connector will plug directly into the iOS Device. However, the HDMI connector will need to plug into the other end of the Lightening Connector to carry video and audio signals to the system.
The USB-C connector is used by a number of different devices including laptops. The USB-C connector will plug directly into the device. However, the HDMI connector will need to plug into the other end of the USB-C connector to carry video and audio signals to the system.

The Display Port connector is used by a number of different devices including laptops. The Display Port connector will plug directly into the device. However, the HDMI connector will need to plug into the other end of the Display Port connector to carry video and audio signals to the system.

Finally, locate the video source switcher. This should be near the instructor station. There will be two options: “Computer” and “Mobile Device”. Choose the one that is labelled, “Mobile Device”.
