**Instructions to run Spybot**

1. Click the **Start button** on the lower left corner of your desktop > in the search box start typing **Spybot** until it show the **Spybot** on the list > right mouse click the **Spybot** and select **Run as Administrator**.

2. In the Spybot - Search & Destroy window click on the Check for Problem

3. Spybot gives you a chance to delete the computer temporary files to speed up the scan. Select Yes or No as you desire.
4. The scan will start and you can see the process bar on the bottom of the Spybot window.

5. When Spybot finishes scanning your computer, it lounges a window displaying all the unwanted files.
   a. On the bottom left corner of the window, display the number of the unwanted files
   b. In the unwanted files section, select the files that you do not want to delete by unchecking the box by it > Fix selected problem.
