When browsing a long article, you can tap the link “Back to the top of the article” that is often added at the end of the pages for your convenience. But what about web pages without this link?

Using iPads, you just need to tap the **Status bar** at the top of the screen to quickly scroll back to the top of the page.

This works in browsers like **Safari** or **Chromes**, and does the same in other apps such as **Mail, Notes, Photos, Pages** and **etc**.
