REBOOT THE iPAd

Did you know you can solve more problems with the iPad by simply rebooting it than any other troubleshooting steps? Is your iPad running slow? Reboot it. Does an app quit every time you launch it? Reboot it.

Unfortunately, it’s easy to confuse putting the iPad into sleep mode as the same thing as rebooting it. To really give your iPad a fresh start, you can reboot it by following these quick steps:

1. Hold down the Sleep/Wake button for a few seconds.
2. The iPad will prompt you to slide a button to shutdown, follow the directions.
3. Wait a few seconds after the screen goes blank and then hold down the Sleep/Wake button again to boot it back up.
4. When you see the Apple logo appear, you can release the Sleep/Wake button.
