GIVE PERSONAL INFORMATION TO ENCRYPTED WEBSITES ONLY

If you're shopping or banking online, stick to sites that use encryption to protect your information as it travels from your computer to their server. Look for https at the beginning of the web address (the “s” is for secure). Some websites use encryption only on the sign-in page, but if any part of your session isn’t encrypted, the entire account could be vulnerable. Look for https on every page of the site you’re on, not just where you sign in.
