Project Manager

Grand Island Office/All areas of Nebraska

Provide daily administrative and technical on-site management of construction projects delivering energy savings for public, institutional, industrial, government, and commercial customers. Assist Engineering and Construction Teams in project design and development including scope, subcontractor selection, cost estimation, installation, and project scheduling. Coordinate with vendors and subcontractors to assure competitive cost, best schedule and delivery for all project-related equipment, supply installations, and construction services. Manage vendors and subcontractors to ensure quality control and project delivery on time and within budget, while meeting or exceeding customer expectations. Provide ongoing project status updates with all parties throughout design and construction. Evaluate technologies and equipment; recommend most suitable for each application. Provide project reports, documentation, technical assistance, support, and collaboration. Manage project expenditures and job cost accounting processes: including accuracy, documentation, approvals, payment reporting, and tracking. Ensure compliance with company, industry, trade, federal, and jurisdictional safety standards, practices, codes. Foster positive and effective business relationships at all levels and project phases. Perform other duties as required.
